

Why Electrical Generation Facilities can benefit from GreenCoal™
Torrefied Biomass:

CHANGING ENERGY MARKETS						
Coal-fired utilities are facing both increased energy demand in the future and increased government regulation	State regulations (Renewable Portfolio Standards of RPS) call for more production from renewable energy sources	Over 30 states currently have RPS in effect	Federal agencies are seeking lower power plant pollution	Concern about climate change – Federal Cap & Trade Legislation	Environmental activists are fighting every coal-fired power plant that is proposed	Recently growing concerns about energy security

The addition of GreenCoal™ Torrefied Biomass to the fuel mix provides a way to meet ever increasing regulations without capital expenditures.
